Environmental Management - Louis Theodore 1998-05-29

There is a growing need to support undergraduate educators in the development of environmental

management educational materials. Recognizing this need, the National Science Foundation funded a College Faculty Workshop on Environmental Management, that was conducted at Utah State University in July and August 1996. The principle objectives of the seminar were (1) to provide a meaningful course which would generate new ideas and innovative educational approaches in the emerging field of environmental management, and (2) to develop an applications-oriented problem workbook which would support undergraduate faculty involvement in the production of course materials. The result of this effort is Environmental Management: Problems and Solutions, an informative text on the essentials of environmental management. More than 200 structured problems presented in the book are meant to elicit a sound understanding of the basics of environmental monitoring, assessment and control. Detailed solutions to each problem, provided with each chapter, will prove useful to both the student and the instructor. This innovative text is a valuable resource for anyone involved in training of engineers and scientists in the field of environmental engineering.

Challenge of Management Accounting Change - John Burns 2003-05-28

The implementation of management accounting change constitutes much more than the selection of what may be perceived as being 'optimal' accounting systems and techniques, followed by a 'technical' process of implementation. Selecting and implementing the 'right' accounting systems and techniques and the technical aspects of implementation are important, but change implementation and change management also involves important behavioural and cultural issues that must be understood and addressed. The main focus of The Challenge of Management Accounting Change is on understanding the processes involved in the implementation of management accounting change and the complexities of, and difficulties involved in, changing management accounting systems, techniques and roles in the UK. This book outlines a framework for interpreting and understanding management accounting change as an on-going process and a range of case studies are used to illustrate both successful and unsuccessful implementations, drawing out the various lessons that can be learned and suggesting some pointers for those embarking on a programme of management accounting change. * Describes the finding of a research project investigating management accounting change in the UK * Focuses on the difficulties involved in changing management accounting systems * Written by experts in the field of management accounting
