biotechnology could play an important role in climate change mitigation (e.g., nutrient-efficient plants) and adaptation (e.g., drought-tolerant plants), renewable energies, biodegradable products, rural development, and global food security; identifying the means to promote resilience, including resilience in ecosystems and in international markets; responding to climate change and other environmental and social change. The focus should also cover issues for vulnerable groups such as mothers and children, the elderly, patients, and migrants to understand the general aspects of consumer behavior.
